

Safe Schools Safe Kids

We Believe in Safety

We established Safe Schools Safe Kids because our changing world means that safety and security needs are increasing and gun violence is a very real threat- even in our schools. With the singular objective of helping to increase safety for the kids in our schools, we have created a modular system that is based on years of custom built solutions that integrate bullet resistant products. Our doors, wall panels, hardware systems and furniture seamlessly integrate with existing building structures and features.

Safe Schools Safe Kids, Inc. has a clear mission: enhance safety and security in our schools. Our experience and craftsmanship allows us to provide extraordinary protection at key thresholds throughout the school building, without compromising the current structure or decor of a classroom, activity space or entryway. Due to the reality that shootings have become more prevalent in recent years, the call for better safety and security has risen dramatically. Safe Schools Safe Kids is working diligently with state and national legislators, corporations and nonprofit organizations to make schools and buildings safer.

Company Overview

Jason Horner established Safe Schools Safe Kids in 2017 to help make American schools safer. His years of experience as President of Aaron Carlson Corporation have given him a unique perspective that helped create the vision for this innovative approach to school safety. From hands on experience in millworking, to training in counter-threat tactics and systems, to his formal education as a CPA, Jason leads a team with an unmatched ability to design defensive solutions that preserve the physical school environment. These systems have been designed with an emphasis on material performance and cost management.

(Aaron Carlson Corporation began as a provider of custom millwork, fasteners and door and window frames in 1891. Built on the pillars of service, expertise and craftsmanship, we provide our customers with custom interior products that enhance the safety and security of their homes or office spaces.)

Safe Schools Safe Kids exclusive designs use bullet resistant materials and are built to fit any space. We can match any existing millwork including historic designs and exotic wood species. Located in Minneapolis, Minnesota we still reside in the original factory location.

Integration is Paramount

Presenting a "lock down, safe house" or "prison" looking building facade garners fear and discomfort. Our modular system of components and materials that are bullet resistant and easily and efficiently integrate with existing construction is vitally important to maintain an environment that is not only safer and more secure, but remains a warm and welcoming space for the school community.

For example, a vestibule front entry system with two sets of doors is the common school entry that we used for product development; it can be adapted to accommodate most school buildings with minimal disruption.
